

I wish to express to the FCC my concerns regarding the implementation of PLC as proposed.

I am firmly against the PLC proposal due to the already known test results and the resulting broadband noise generated will devastate the RF spectrum. These tests were conducted in both the US and foreign countries showing that PLC is not independent of itself but creates an immense broadband noise source harming the HF spectrum and all RF communications. All of the countries involved in performing these tests have absolutely banned the implementation of any PLC systems. I believe the US should also follow their lead and ban the implementation of any type of PLC systems.
